SELF-PATTERNING OF PHOTO-ACTIVE DIELECTRIC MATERILS FOR INTERCONNECT ISOLATION

## RESPONSE TO RESTRICTION REQUIREMENT

This is in response to the Restriction or Election

Requirement in the Office Action dated 03/21/05. In that

Office Action, restriction was required to one of two stated

## CERTIFICATE OF MAILING

I hereby certify that this correspondence is being deposited with the United States Postal Service as first class mail in an envelope addressed to: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450, on April 12, 2005.

Stephen B. Ackerman, Reg.# 37761

Signature/Date 39 4/12/08

Inventions under 35 U.S.C. 121. The Inventions stated are Group I - Claims 35-64 to an apparatus, classified in Class 257, subclass 774 and Group II - Claims 1-34 to a process, classified in Class 438, subclass 637.

Applicant provisionally elects to be examined the Invention described by the Examiner as Group II - Claims 1-34 drawn to a process classified in Class 438, subclass 637. This election is made with traverse of the requirement under 37 C.F.R.1.143 for the reasons given in the following paragraphs.

The Examiner is respectfully requested to reconsider the Requirement for Restriction given in the Office Action. The Examiner gives the reason for the distinctness of the two inventions as (1) that the process as claimed can be used to make other and materially different products or (2) that the product as claimed can be made by another and materially different process (MPEP 806.05(f)). However, upon reading the product Claims against the process Claims one can readily see that the product Claims are directed to "an interconnect pattern created in a layer of insulation material" and the process Claims are directed to "a method for creation of an interconnect pattern", it is necessary to obtain claims in both the product and method claim language. The method Claims necessarily use the product and vice versa. The field of search must necessarily cover both the method class/subclass

438/637 and products class 257/774 in addition to other related Classes and subclasses to provide a complete and adequate search. The fields of search for the Group I and Group II inventions are clearly and necessarily co-extensive. Examiner's suggestion that "In the instant case unpatentability of the Group I invention would not necessarily imply unpatentability of the Group II invention, since the device of the group I invention could be made by processes materially different from those of the Group II invention. For example, in claim 35, the layer of ARC can be removed from underneath the interconnect pattern instead of being removed from the exposed surface as required by the method of claim 1", is very speculative and really has nothing to do with the Claims as presented in this Patent Application. Further, it is respectfully suggested that these reasons are insufficient to place the additional cost of a second Patent Application upon Therefore, it is respectfully requested that the Applicants. the Examiner withdraw this restriction requirement for these reasons.

Withdrawal of the Restriction Requirement and the Allowance of the present Patent Application is requested.

Sincerely,

Stephen B. Ackerman, Reg. #37761
